

## Continuous motion conveyor system

The Autobag Takeaway Conveyor improves the productivity of packaging operations by simply moving filled bags from the packaging location up to bench height, or to another location.

Designed to maximize available space, the Takeaway Conveyor is a continuous motion conveyor that can accommodate most bag packaging applications.

This flexible system has a low profile and is available in four different angles of incline that allows it to integrate easily with Autobag baggers and bag packaging equipment.

### USER BENEFITS

- Flexible and fully adjustable
- Saves time by enabling operators to have more time packing and less time moving finished product
- Improves work environment by conveying the product to bench height, which reduces the need to pick product from filled bins
- Low profile design maximizes existing work areas with limited space

### TYPICAL APPLICATIONS

- Any bag packaging application requiring moving completed packages from the bagger area to a tote, master pack or sorting table

### TECHNICAL SPECIFICATIONS

<b>Belt Type:</b>	2M8 NO-US PVC
<b>Conveyor Length:</b>	20 in. horizontal by 40 in. incline (51 cm x 102 cm)
<b>Belt Width:</b>	12 in. (31 cm)
<b>Belt Speed:</b>	26 feet per minute, fixed
<b>Available Angles:</b>	Standard in a 45 degree fixed configuration. Can be custom ordered in other angles.
<b>Power:</b>	Infeed voltage - 110V, 60 Hz, 600 Watts
